Acitivities 	<ul style="list-style-type: none">• IT-Governance in Healthcare• „Lab of Tomorrow“ with Merck (March 2017)• Contact with pandemy project in West Africa, Health Project in Tanzania, clinic and university partnerships• Project: Health Games Kenya• Planned: German-East African E-Health Forum• Dialogue Merck-BMZ-GIZ to future cooperation activities

Developing IT-Governance in Healthcare

- ➔ **Digital technology presents a major opportunity for the health sector in Africa but challenges remain**
 - How can a central exchange of patient data between public hospitals and also private hospitals be carried out?
 - How can different projects be linked to form a national patient record?
 - How can it be ensured that realistic statistical values are determined in health care?
 - How can it be ensured that the costs of the eHealth projects remain affordable?
- ➔ **IT-Governance in Healthcare:** towards harmonized and effective eHealth solutions
 - Assist African partner countries in the strategic development of eHealth governance from the start
 - Promoting norms and standards
 - Support to improve quality, safety and access to healthcare
